(54) Title: IMPROVED SHOWERHEAD AND VALVE ASSEMBLY FOR RECEIVING A RINSING SYSTEM

(57) Abstract: An improved showerhead provides a fluid diverter valve that allows quick connection and disconnection of a hand held sprayer used for cleaning shower stalls and bathrooms. The diverter valve includes a valve housing having a water inlet, a first water outlet and a second water outlet. A valve runner moves between a first position wherein the valve runner seats to permit fluid communication between the inlet and the first outlet and a second position wherein the valve runner seats to permit fluid communication between the inlet and the second outlet. The valve runner is moved from the first position to the second position substantially by gravity.
